Global View Exports

Sustainable growing solutions from nature

Coconut-based horticultural and agricultural products,
sourced and prepared across Tamil Nadu's coir belt.

Growing a greener future

Global View Exports is an Indian exporter specialising in coconut and coir-based horticultural and agricultural products, operating out of Namakkal district in Tamil Nadu. We are a registered member of the Coir Board of India.

Our work draws on Tamil Nadu's long-established coir belt — coco peat, grow bag substrate and coir fibre prepared from a natural, renewable resource and supplied to a written specification for growers, nurseries and greenhouse operators buying internationally.

FROM RESOURCE TO MARKET

Coconut

↓ Processing

Coir & coco products

↓ Horticulture

Global markets

Coconut is the resource we build on. Coir fibre and coco peat are both co-products of coconut husk processing — prepared into material for horticulture and agriculture rather than left as a by-product with no further use.

Our product range

Coco Peat

Natural growing medium for horticulture.

Coco Peat 5 Kg Block

Compact, compressed growing medium.

Grow Bags

Growing solutions for controlled cultivation.

Coir Fiber

Natural coconut fibre for horticultural and industrial use.

Husk Chips

Coconut-based material for horticultural applications.

Allied Products

Additional horticultural and industrial coir products.

01

Coco Peat

NATURAL GROWING MEDIUM FOR MODERN AGRICULTURE

Coco peat is a coconut-derived growing medium used across horticulture, nurseries, greenhouse cultivation and potting applications. Prepared from washed, dried and screened coir pith, it is compressed for handling and rehydrates in water ahead of use.

Moisture retention

Holds water well above its dry weight

Good aeration

Open structure supports root development

Lightweight

Easier handling and freight than soil

Coconut-derived

A renewable co-product, not a waste stream

Screened coir pith drying in the yard before compression

Pressed coco peat blocks stacked ahead of despatch

10–15%

Typical moisture content

5.5–6.8

Working pH range

5 : 1

Compression ratio, blocks

02

Coco Peat 5 Kg Block

COMPACT · CONVENIENT · HORTICULTURAL

Freshly pressed blocks at the compression stage

5 Kg

WEIGHT

<0.5

EC MS/CM

5.5–6.8

PH

Block dimension 11.8 × 11.8 × 4.3 in (30×30×11 cm)

Compression ratio 5 : 1

Dehydrated yield ≈ 75 litres per block

Moisture 10 – 15%

Fibre content < 2%

Applications

- ✓ Commercial greenhouses
- ✓ Nurseries
- ✓ Potting mixes
- ✓ Horticulture
- ✓ Golf courses

Why a compressed block

- ✓ Compact for transport
- ✓ Efficient storage
- ✓ Easy handling
- ✓ Expands on hydration

Grow Bags

EFFICIENT GROWING SOLUTIONS FOR CONTROLLED CULTIVATION

Coco peat and coco chip substrate packed in UV-stabilised poly for greenhouses, nurseries and other controlled cultivation systems — black inside to exclude light, white outside to reflect heat and keep the root zone cool.

Applications

- ✓ Greenhouses
- ✓ Nurseries
- ✓ Horticultural cultivation
- ✓ Controlled growing systems

Flat grow bags — typical specification

Standard length	100 cm (≈ 39 in)
Width options	12 · 15 · 18 · 20 cm
Expanded height	8 – 18 cm, by crop
Composition	100% pith, or with coco chips for aeration
Film	UV-stabilised, black inner / white outer

Open-top bags for terrace and nursery growing

Greenhouse row cultivation, drip-fed

Coir Fiber

NATURAL COCONUT FIBER FOR DIVERSE APPLICATIONS

Coir fibre is derived from coconut husk and finds applications across horticultural, industrial and related sectors. Fibre is graded by staple length and cleanliness, then pressed into bales for container loading.

Product

Baled fibre, cut fibre, spun yarn and rope

Applications

Rope, mattress fill, erosion control, automotive felt

Natural origin

Coconut husk, mechanically extracted

Spun coir yarn and rope, in coils or cut lengths

Palm fibre bundled alongside coir bristle fibre

Husk Chips

NATURAL COCONUT-BASED GROWING MATERIAL

Compressed husk-chip discs, graded by size

Chip-based plugs in nursery propagation

Coconut husk cut into chips and graded by size. Chips drain freely and hold their structure longer than pith, giving them a role wherever a coarser, free-draining coconut-based material is useful.

Suitable applications

Horticulture

Growing media blends

Potting mixes

Nursery applications

Landscaping

Drainage layers

Graded to order. Husk chips are graded by size to order — from the fine screened material used in growing-medium blends through to coarser grades for landscaping and drainage layers.

Chip-blended substrate in greenhouse row cultivation

Applications

Commercial greenhouses

Nurseries & propagation

Potting mixes

Controlled cultivation

Terrace & container growing

Landscaping & erosion control

Plant propagation

Industrial coir — yarn & rope

PROCESS

Quality from source to supply

Inspect

Pack

Export

Defibring and screening line

Material labelled and checked to grade before packing

Our approach is export-oriented from the first stage: consistent material, careful processing and handling, and packing suited to the buyer and the route. We work to the specification agreed with each buyer and keep communication clear through the order.

Packed and loaded for despatch

Why Global View Exports

Indian sourcing

Coconut-based products sourced from India.

Product range

Horticultural and allied coir products.

Export oriented

Designed for professional B2B supply.

Nature based

Products derived from coconut resources.

Buyer focused

Attention to buyer requirements and product needs.

Professional communication

Clear and responsive business communication.

Finished stock held under cover ahead of container loading

"Consistent material, clear communication, and an order packed the way it was agreed."
